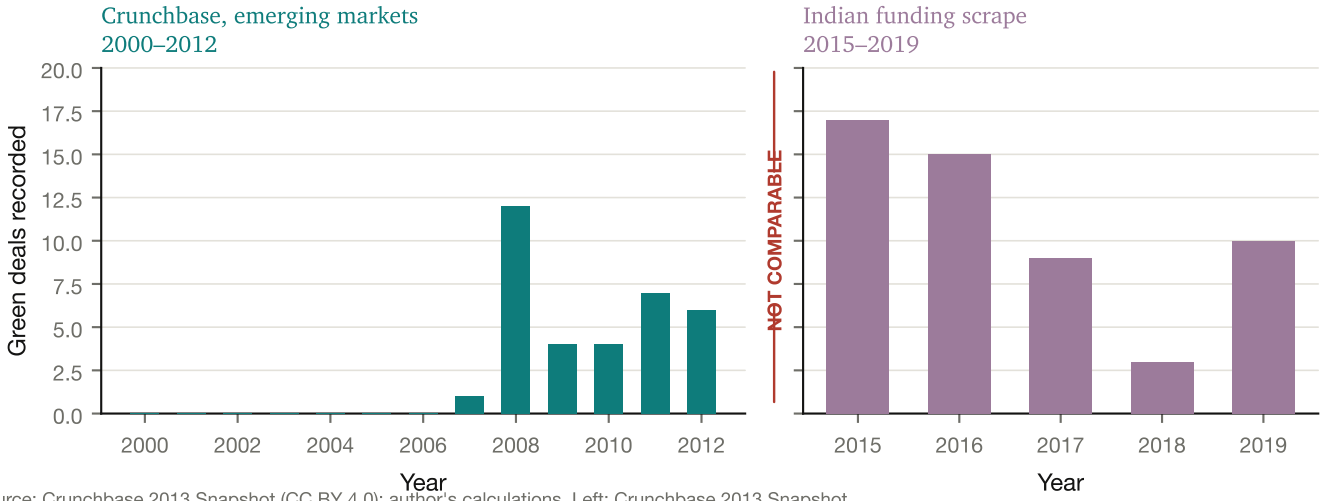
A later window in one large emerging market reproduces the same scarcity

Green deals per year. Two different instruments measuring two different populations; the panels share no axis.



Source: Crunchbase 2013 Snapshot (CC BY 4.0); author's calculations. Left: Crunchbase 2013 Snapshot, emerging markets excluding China and LDCs, 34 green deals. Right: the Indian startup funding scrape, 3,036 dated deals of which 54 are green under the SAME lexicon, $502m nominal. The two are never pooled: taxonomies and amount conventions are not compatible, no category_code exists in the Indian data so Tier A cannot fire, and the scrape's coverage rules are unknown. 2020 is a partial year and is excluded.
