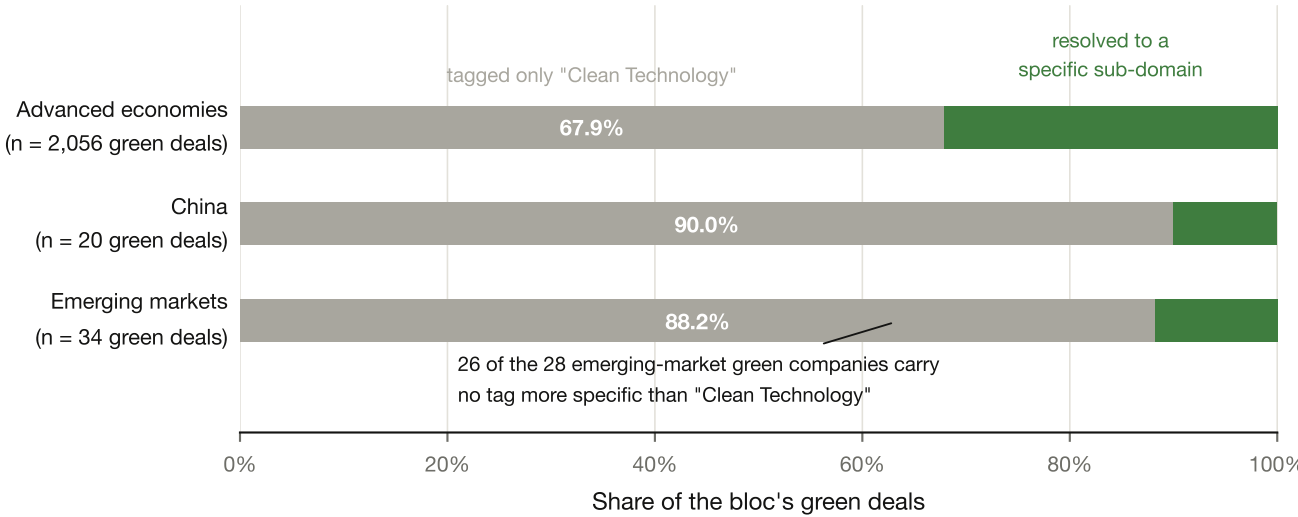
The taxonomy cannot say what kind of green an emerging-market company is

Share of green deals resolved to a specific sub-domain, by bloc, 2000–2012.



Source: Crunchbase 2013 Snapshot (CC BY 4.0); author's calculations. n = 2,174 green deals carrying a sub-domain label. The eleven specific sub-domains are solar, wind/hydro/geothermal, biofuels, storage, efficiency and smart grid, electric mobility, water, waste and circular, sustainable agriculture, green building, and environmental monitoring. This figure replaces the planned emerging-market sub-domain mix comparison, which the measurement failure shown here makes impossible.
